

## **Project Overhaul Description**

My company, Oscorp Corp, lacks a clear cybersecurity strategy, leaving all related tasks to the IT department. The CEO of Oscorp has noted my GRC (Governance, Risk & Compliance) skills and has asked me to leave my current position to become the full-time Senior Cyber Security Consultant for Oscorp and he has offered to double my salary!

However, he has one condition. He has asked me to conduct a Maturity Assessment and design a comprehensive cyber security program for Oscorp, and he wants the program to highlight the current deficiencies in Oscorp's cyber security controls.

### **Task:**

Perform a Maturity Assessment by identifying Oscorp's cyber security controls and then comparing them against the NIST CSF framework to identify the gaps and deficiencies, using the:

- NIST CSF cyber security program spreadsheet.
- Current stated description of Oscorp's cyber security controls.

### **Project Analysis:**

1. I evaluated each security control line by line against the NIST CSF framework to find gaps, confirm proper configurations, and to identify needed controls.
2. Once the task was completed, I forwarded my analysis to Oscorp's CEO and expect to receive a reply soon.
